

BOUNDED CONTEXT - FUNCTIONAL CAPABILITIES

UBIQUITOUS LANGUAGE	
Functional Capabilities	<p>The purpose of the four-corners model is to facilitate secure delivery of an e-Invoice from a Seller to a Buyer. The model exposes two core functions or roles.</p> <p>SERVICE DISCOVERY is comprised of two components which together provide the information required to complete an e-Invoice delivery. The first component of Service Discovery is the SERVICE LOCATION. This is obtained through a query to a Service Metadata Location ("SML") service which provides details of the secure route to the buyer. The second component of Service Discovery is a query to a Service Metadata Publisher ("SMP") service which returns the SERVICE CAPABILITY of the party.</p> <p>e-INVOICE DELIVERY is the creation of a compatible invoice which contains a request for payment and specifications for execution.</p>
Service Discovery	<p>Seller must discover the appropriate path to present the invoice to the buyer. Seller queries SML to discover the route to the SMP which relays capability and final end point for invoicing the Buyer.</p>
e-Invoice Delivery	<p>Specifications for delivery having been obtained through the service discovery, a request for payment is made between the entities using the agreed upon interoperable format.</p>
